

Calculating Your SAT Score Target

Find out what's right for you

By the PrepScholar Team

Setting a Score Target

By now, you already know that your SAT score is vital for getting into college.

This leads most people to this important question: **how high does your SAT score need to be?**

Having a concrete target SAT score is really important. It gives us a goal to aim for and helps us track our progress during our study time.

Your score target needs to be different from everyone else's, because you have different goals from them. You need your own score target to aim for, based on data.

In this guide, we'll teach you how to research what your score target needs to be.

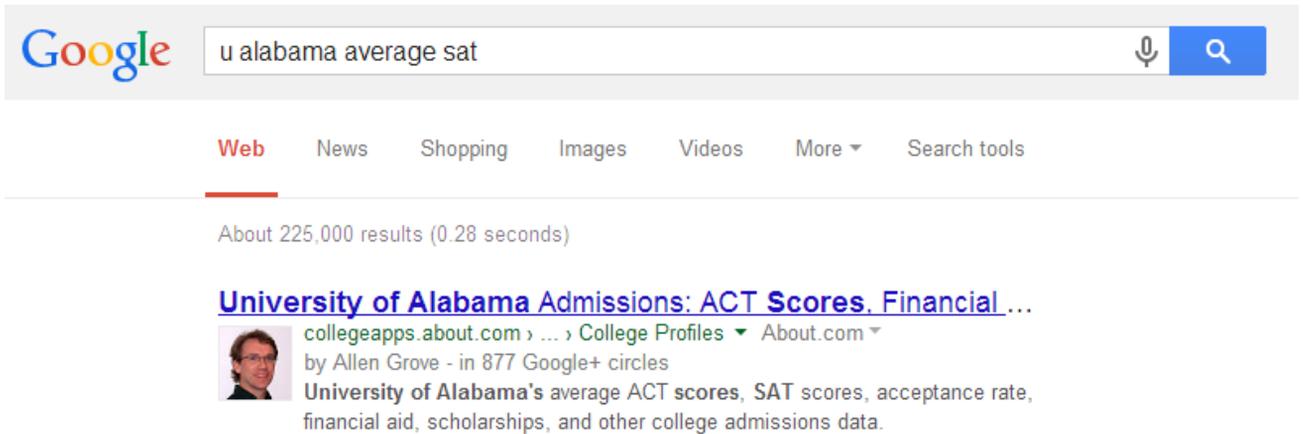

Instructions

Your SAT score target really depends on what schools you want to apply to. We've created a worksheet to guide you through the process. I highly recommend you print out the next page before going further.

Got it printed out? We'll be filling out each line of this worksheet.

First, fill in the schools you want to get into on the left.

For each school, we're going to find out what SAT scores their students got. Google this phrase: "[name of school] average SAT." For example, I'll search for U of Alabama:

The screenshot shows a Google search interface. The search bar contains the text "u alabama average sat". Below the search bar, there are navigation tabs for "Web", "News", "Shopping", "Images", "Videos", "More", and "Search tools". The search results show "About 225,000 results (0.28 seconds)". The top result is titled "University of Alabama Admissions: ACT Scores. Financial ..." and is from "collegeapps.about.com". It includes a small profile picture of a man and text indicating it is by Allen Grove, with 877 Google+ circles. The snippet describes the page as containing "University of Alabama's average ACT scores, SAT scores, acceptance rate, financial aid, scholarships, and other college admissions data."

Most schools will have an about.com link, as shown here. Some schools will list scores on their own websites, which you can use to double check your numbers.

The about.com page lists the 25th/75th percentile scores for U Alabama. This basically covers the middle 50% of all students admitted to U Alabama. Sum up the scores across all 3 sections and enter them in the worksheet. For this example, the 25th percentile is 1490, and the 75th percentile is 1870.

Do this for each of the schools. Then, calculate your score target based on the instructions.

Here's an example of a sheet I filled out:

SAT Score Target Worksheet

School Name	25 th Percentile (of 2400)	75 th Percentile (of 2400)
U of Alabama	1490	1870
Georgia Southern	1510	1740
Samford University	1540	1880
U of California, Santa Barbara	1640	1990
Average	1540	1870

My SAT Score Target

Total Score: 1870
(we recommend you use the average 75th percentile score calculated above)

Math: 630 Reading: 620 Writing: 620

Once you're done with this, I recommend you do two things:

- Share it with your parents. This will get everyone on the same page. Plus, they'll be impressed that you're taking the initiative to set your own goals.
- Tape it to your wall. I want you to think about your score target every time you study. This is your goal, and you're going to meet it.

Don't get stressed out by your score target. You can reach it. Every single student I've worked with has met his or her score target if he or she put in serious effort to study.

AND NOW WHAT?

Through this guide, you've learned how to find your own SAT score target. This is your personal target – not your friends', not your teammates'. So block out what everyone else is doing and focus on your own prep.

You might now be wondering how to best study for the SAT. If so, check out our free Ebook on that topic! **We survey the advantages and disadvantages of different methods of test prep including self-study, classroom, and tutoring.**
